
Manufacturing Capabilities & Quality Assurance

Design • Manufacture • Installation

ALLTEC Corporation is a leader in the design, manufacture, and installation of lightning protection and grounding systems. For over fifteen years, our sights have been set on improving product quality and customer service. In February 2001, we relocated our corporate office and manufacturing facility to Canton, North Carolina, just west of Asheville. This new facility is furnished with state-of-the-art manufacturing equipment, which enables us to produce a broader product line while adhering to strict design tolerances. We now have the capability to manufacture our complete line of standard lightning protection and grounding products, with the flexibility to construct almost any custom product our clients may need.

ALLTEC warehouses a full inventory of lightning protection and grounding materials. This allows us to fill all of your orders and then ship them directly from one central warehouse, in a timely manner. We also keep a complete inventory of raw materials to manufacture special orders. By eliminating the time required to order and receive materials, we typically satisfy special orders seven to ten days faster than our competitors.

ALLTEC's full product line is approved and listed by Underwriters Laboratories. We submit to regular inspections by UL to ensure continuing quality control, and adherence to all current lightning protection product specifications. Our products meet or exceed all current specifications for the lightning protection industry.

To further ensure that our products are of the highest quality and newest technology, we operate an internal Research and Development department to constantly improve our products. Our goal is to develop innovative solutions to lightning protection problems in today's computerized world. An aggressive research program utilizing Independent Testing Laboratories for non-biased research on our product testing and development helps to keep us on the cutting edge of lightning protection technology.

Quality and customer service form the foundation of our business. We have implemented a quality assurance program to make certain your order is manufactured to exacting specifications, and from only the highest quality materials. Our program begins with diligent quality control inspections during the manufacturing process, and continues with step-by-step inspections throughout the entire order filling and shipping process. This controlled environment ensures that your shipment contains exactly what you ordered, is packaged correctly, and shipped efficiently to arrive at your doorstep on time.
