

SITE SURVEYS

When you experience lightning or equipment problems, call on ALLTEC to provide a complete evaluation of your facility. Our audits encompass a multitude of tests and our comprehensive reports detail our findings, which include solutions and cost estimates. Our experience in this area has solved many of the most difficult and costly lightning protection and grounding problems at various facilities located around the world.

TURNKEY SERVICES

ALLTEC's engineers and technicians are some of the most experienced professionals in the industry. Our crews can perform installations for all lightning protection, grounding and power quality equipment including: External Earth Grounding, Internal Equipment Bonding and Grounding, Structural Lightning Protection Systems for buildings and tall structures, Point Discharge Dissipation Systems and Transient Voltage Surge Suppression Equipment for AC Power, Telephone, Data, RF, and Video equipment. ALLTEC Corporation also works closely with other companies specializing in servicing Commercial and Industrial Power, Communication Towers, Computer and Data Equipment, and Alarm and Security Systems. This gives us the ability to provide any specialty equipment or services that may be required to perform your installation all through one supplier and one contact.
