Plain Ground Bar

Ground Bar with wall mounting brackets and insulators

Ground Bar with wall mounting brackets, insulators, and a 25' ground conductor

Ground Bar Numbering System

To order, simply follow the four steps below to specify the type and size of the ground bar. The example below, shows how to order a ground bar with wall mounting brackets, insulators, and an exothermically welded ground conductor. The ground bar is 1/4" thick, 4" wide and 12" in length. It has a "01" hole pattern and a No. 2 AWG solid tin ground conductor.

TBIT-7	4	01	12
(1) Type	(2) Size	(3) Hole Pattern	(4) Length

EXAMPLE: TBIT-7401-12

1. **Type:** TB – Plain ground bar
TBI – Ground bar with all mounting brackets and insulators
TBIT – Ground bar with wall mounting brackets, insulators and a 25' ground conductor.
2. **Size:** Second digit represents width.
3. **Hole Pattern:** Second two digits represent hole pattern
– See Following Pages for available standard hole patterns.
4. **Length:** Dash and final digits represent length in inches.

Note: Ground conductor tails are standard 25' of #2 solid tinned copper unless otherwise specified.

Tin and nickel Plating available. Other special plating available upon request.
Plating, special hole sizes, patterns and ground leads are all available by special request.
